SUBMISSION DATE: 22/21/2025

CRIME MANAGEMENT SYSTEM

The crime management system is organized into POLICE_STATIONs.

Each POLICE STATION has a unique station_id, location, contact_number and a police_officer who as the station in-charge.

Each station handles multiple crimes.

Each CRIME has a unique crime_id, a crime_type, a description, date and time, and location where it occurred.

Each CRIME is assigned to one POLICE_STATION, and is investigated by one or more officers. We store the VICTIM(S) and SUSPECT(S) involved in each crime.

We store each POLICE_OFFCER's officer_id, name, rank, contact_number, address and date of joining.

Each officer is assigned to one police station, but may investigate multiple crimes.

We also keep track of the lead investigator for each crime.

Each crime may involve one or more SUSPECTs.

For each SUSPECT, we store their suspect_id, name, street_name, age, gender, address and criminal_records_summary and status(Arrested ,Wanted).

A SUSPECT may be linked to multiple crimes, and each ARREST is recorded with the date, location, and arresting_officer.

Each VICTIM has a victim_id, name, age, gender, contact_info, and address.

Each EVIDENCE has a unique evidence_id, crime_id, type, description, location found and date collected.

Each piece of evidence is linked to a specific crime.
